Theories of Rotary Encoder

The main part of optical rotary encoder is composed of as the drawing below. Lights of transmitter (LED) go through rotating disc, fixing disc and get to receiver. As disc rotates with shaft, receiver gets varying light and outputs sine wave signals accordingly. Sine wave is then amplified to square wave and thus becomes output signals of encoder.

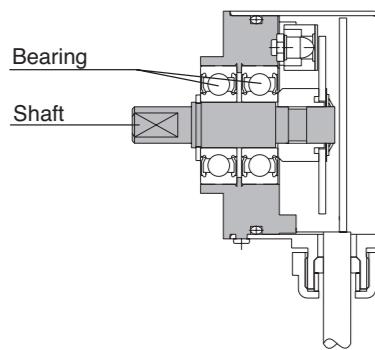

Construction of Rotary Encoder

Basic construction of the encoder is shown in the below. There are several kinds of the encoders whose constructions are different from each other types, such as the built-in type the hollow shaft type and so on, but the basic theories of them are all the same. The encoder is the precise instrument, and needs the accurate mechanism to maintain the accuracy of the photo-electronic system.

Especially, the thrust deviation of the slotted code wheel and displacement of the disk caused by the temperature change are the main problems.

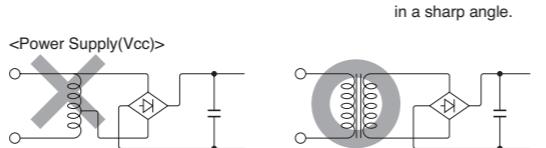

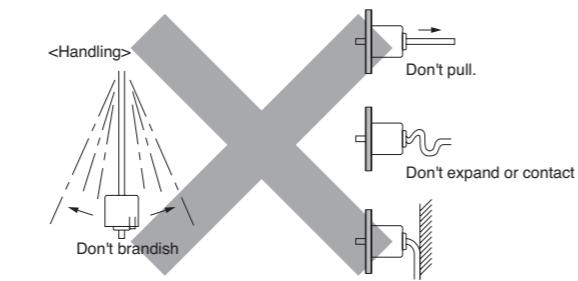

We resolve these problems by our original technologies of the photo-electronic system and the electronic circuit design.

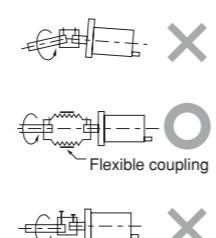

Precautions for Installation

- 1) Do not give the encoder an excessive shock or vibration because some of the encoders are equipped with a glass disc.
- 2) The shaft of the encoder is held with a pair of bearings. An excessive load to the shaft may deteriorate the life and/or accuracy of the encoder. Avoid an excessive load to the shaft.
- 3) Enough power supply to encoder should be guaranteed. Unsatisfactory power supply may result in an abnormal output waveform.
- 4) For encoder output connection, use a shielded cable. To avoid AC interface pickup, the cable should be run apart from heavy duty AC carrying lines. The maximum length of the cable is 5m for Voltage output, and 10m for Open Collector output, but Line Driver output is preferable if there is interference of noise.
- 5) As some optical components are used in the encoder, the influence of dust, oil, water and etc. should be minimized when installing.
- 6) The specification and mechanical dimensions are subject to be changed without prior notice.

Precautions for Installation

- Connect with a flexible coupling such as a bellows coupling between the encoder and the rotational shaft.

Don't bind tightly slipping down their center of the shafts over 0.1mm like both side of drawings above.

Explanations on NEMICON Encoder Phraseology

Phraseology

Incremental Encoder

Explanations

Pulse train and sinusoidal signal train are given as incremental data

Absolute Encoder

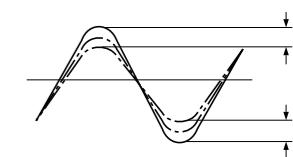

Mechanical angular position is given as absolute data

Sine Wave

Analog signals of almost sine wave generated for photo sensor

Amplitude

Average amplitude value of output sine wave

Amplitude Variation

Amplitude regulation of output sine wave

Resolution

Output pulse numbers in a revolution of encoder shaft

CW Rotation

Clockwise (see from shaft side)

CCW Rotation

Counter Clockwise (see from shaft side)

2 Signals of 90° Phase Difference

2 signals each 90° phase difference by electrical angle (SigA,SigB)

Index Signal

Datum position signal generated once a revolution (SigZ)

Angular Signal

Magnetic pole position signals for AC Servo-Motor (SigU,SigV,SigW,SigF0,SigF1,SigF2,SigF3)

Pole Numbers

The number of angular signal edges
(Number of count up and count down of incremental signal in one rotation.)

Power Supply(Vcc)

Voltage supplied to encoder
Apply the normal voltage within limit to encoder

Current Consumption

Current consumed by encoder
Power Supply(Vcc) needs current capacity over the current consumption specification

Explanations on NEMICON Encoder Phraseology

Phraseology	Explanations
Voltage Output (NPN)	Voltage signal generated output circuit with pull-up resistor on collector of grounded-emitter transistor
Open Collector Output (NPN)	Output with collector opened (No voltage signal) (Users have to add a pull-up resistor.)
Line Driver Output	Differential output by Line Driver IC (Refer to RS422A)
Push-Pull Output	Output circuit with both emitters of NPN and PNP transistor
Maximum Sink Current	Max. sink current of encoder's output circuit
Rise & Fall Time of Output Signal	The time gap between 10% to 90% level of pulse signal edge
Maximum Frequency Response	The frequency which satisfies the specifications of the waveform and duty ratio of A, B phases
Insulation Resistance	Impedance between output and body of encoder (Test by Megger)
Starting Torque	Rotating moment necessary for shaft starting
Shaft Loading	The load put to rotating shaft
Bearing Life	The approximately total bearing rotation in consideration of shaft loading
Maximum Permissible Speed	Maximum rotation allowed mechanically in a minute
Operating Temperature	Temperature range for operation satisfied specification
Storage Temperature	Temperature range for storage not applying satisfied specification

Output Circuit

The circuit diagram shows a PNP transistor connected as an inverter. The collector terminal is labeled 'Vcc' (power supply), the base terminal is connected to the input 'Signal', and the emitter terminal is connected to ground ('0V'). A diode is also present in the circuit.

The circuit diagram shows a single-pole double-throw (SPDT) switch. It consists of a PNP transistor with its collector terminal connected to the top rail. The base of the transistor is connected to one end of a horizontal line. The other end of this line is connected to the common-emitter connection of a common-emitter amplifier stage. This stage is formed by a resistor and an NPN transistor. The output of the amplifier is connected to the base of a second PNP transistor. The collector of this second PNP transistor is connected to the bottom rail. A diode is connected between the collector of the first PNP transistor and the base of the second PNP transistor. Another diode is connected between the collector of the second PNP transistor and the bottom rail. The top rail is labeled V_{CC} , the bottom rail is labeled $0V$, and the middle rail is labeled $Signal$. A 50Ω load is connected between the $Signal$ rail and the bottom rail.

Heavy Duty 50mm Diameter Encoder

- Most Advanced IP65 Encoder.

	Mounting Tolerance (Falling angle to shaft)			1° Max		
	Material	Shaft Joints: Brass	Bellows: Phosphor Bronze			

GJ TYPE

The following are to be cared when a plastic made coupling is used.

- Fastening torque of set screw is to be cared not to exceed the specified torque in the figure. Otherwise the screw tap could be damaged resulting in shaft slippage.
- The shaft must be inserted less than "B" dimension, not to be engaged too deep.
- Do not apply over torque to encoder shaft.
- High speed rotating use for encoder over 3000min^{-1} must be carefully designed securing safety factor over 2.0.

Encoders for Customers

[Develop Custom Made Encoders]

Followings are several kinds of the products developed by coordinated efforts with our customers.
(Only the small portion of the such products are shown by the limit of the paper.)

12SA Model

**Shaft Type
Sine-Wave Output Encoder(A, B)**

- Feature
 - Small-size house encoder with OD12mm (OD12mm x L13.5mm).
 - Low torque, low inertia type.
 - Highly accurate signal.

47H Model

Hollow Shaft Type Encoder

- Feature
 - OD47mm hollow shaft type encoder (OD47mm x L34mm).
 - High resolution type with 8192 P/R.
 - Output signal of 6 signals of ABZUVW with linedriver.

37HA-M Model

**Battery Backup
Multi-turn Absolute Encoder**

- Feature
 - OD37mm absolute encoder (OD37mm x L35mm).
 - Multi-turn data is sustained with a battery installed in outside of encoder.
 - It supports 8 encoders through Bus-line connecting.
 - The installed EEPROM supports read in and read out of data freely.

47T Model

Tepared Shaft Type Encoder

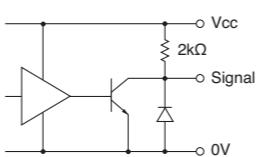

- Feature
 - OD47mm Tepared shaft type encoder (OD47mm x L38.4mm).
 - High resolution of 8192P/R.
 - Output signal of 6 signals of ABZUVW with linedriver.
 - Without interpolating technic, Signal flutter is reduced by 75% from out conventional encoder type.

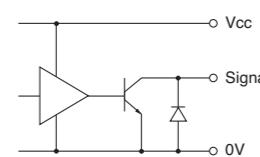

Output Circuit

(Example circuits are as follows, if you need more information, please see the detail catalog.)

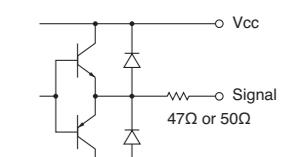

1) Voltage Output

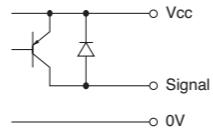

2) Open Collector output

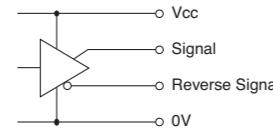

3) Push-Pull output

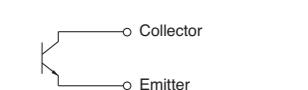

4) PNP Mode Open Collector Output

5) Line Driver Output

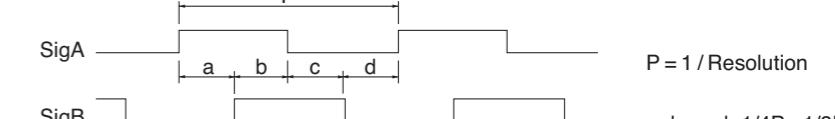

6) Sine Wave Signal Output

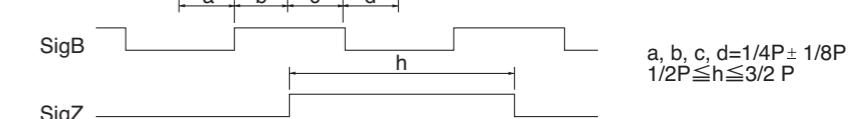

Output signal timing

(Example circuits are as follows, it's typical output timing chart. If you need more information, please see the detail catalog.)

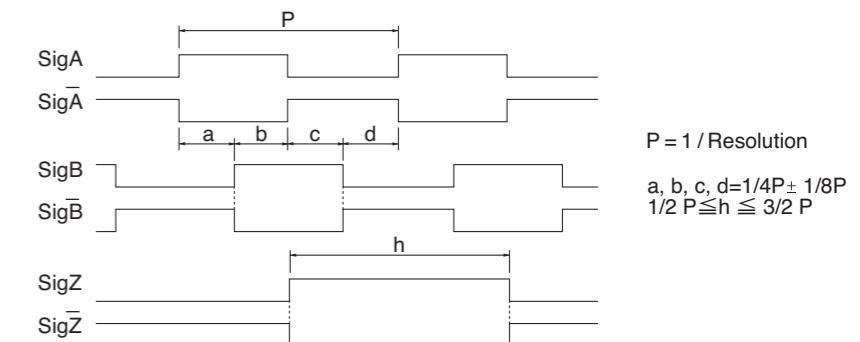

1) Voltage Output

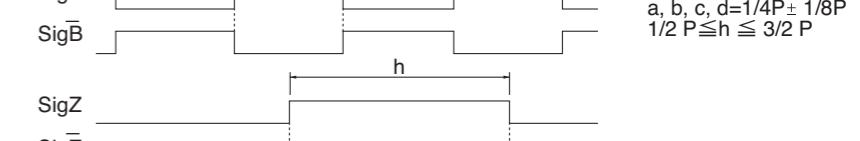

2) Open Collector Output

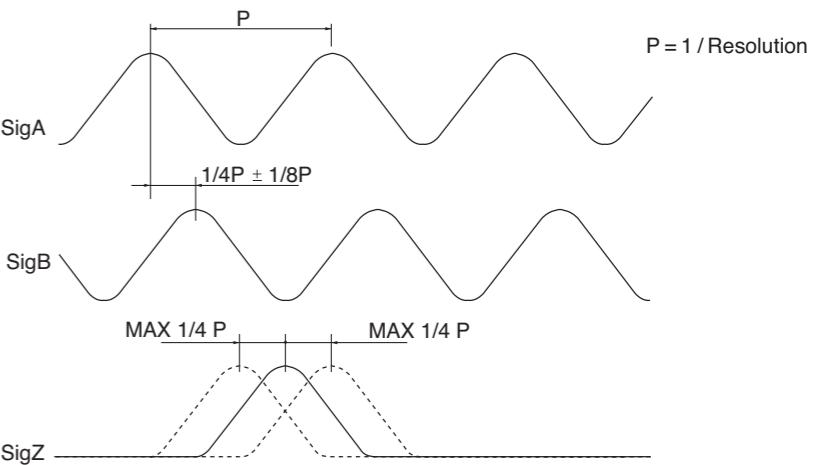

3) Push-Pull Output

4) PNP Mode Open Collector Output

5) Line Driver Output

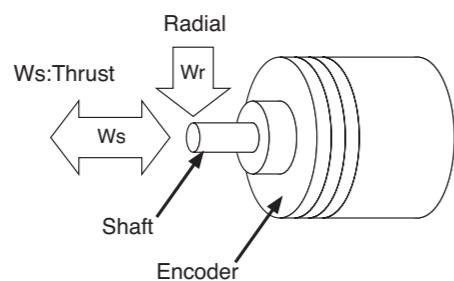

6) Sine Wave Signal Output

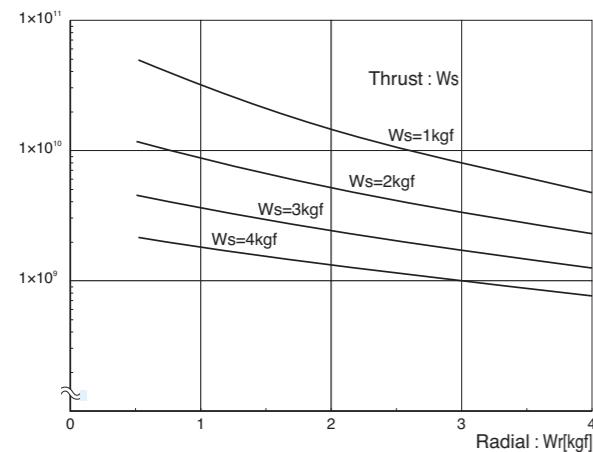

Bearing Life

The followings are the examples of different bearing lives when exerting radial and thrust loading to the bearings.(Theoretical value)

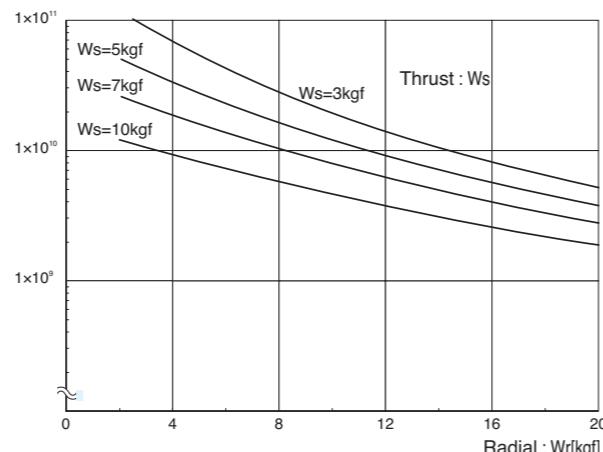

38S

Total Rotation [R]

NE

Total Rotation [R]

Warranty and Maintenance

The Followings are Warranty and Maintenance of our products:

1. Warranty

- (1) Our products provide a warranty of two year period after shipment.
- (2) In this period, the warranty is not available if in following cases:
 - (a) The products are dropped, shocked, mis-handled, or used beyond the specifications determined.
 - (b) The natural disasters such as flood, fire, etc.
 - (c) The products are repaired or modified by others except NEMICON CORP.

2. Charged Repair

- (1) The repair out of Warranty Period will be charged in accordance with NEMICON's Regulations.
- (2) Overseas (including on-visit) repairing service will be charged otherwise on discussion.
- (3) In case of request for test report, extra charge is necessary.

3. Service Network

Please contact our sales department or nearest agents for maintenance service.

4. Others

- (1) The specification and mechanical dimensions are subject to be changed without prior notice.
- (2) For more details or those other than these items will be stipulated otherwise.
