Theories of Rotary Encoder

The main part of optical rotary encoder is composed of as the drawing below. Lights of transmitter (LED) go through rotating disc, fixing disc and get to receiver. As disc rotates with shaft, receiver gets varying light and outputs sine wave signals accordingly. Sine wave is then amplified to square wave and thus becomes output signals of encoder.

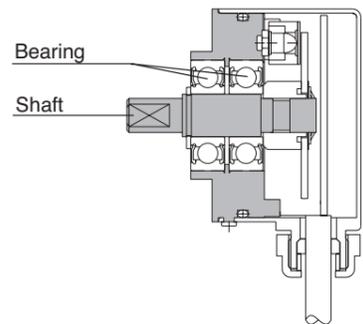

Construction of Rotary Encoder

Basic construction of the encoder is shown in the below. There are several kinds of the encoders whose constructions are different from each other types, such as the built-in type the hollow shaft type and so on, but the basic theories of them are all the same.

The encoder is the precise instrument, and needs the accurate mechanism to maintain the accuracy of the photo-electronic system.

Especially, the thrust deviation of the slotted code wheel and displacement of the disk caused by the temperature change are the main problems.

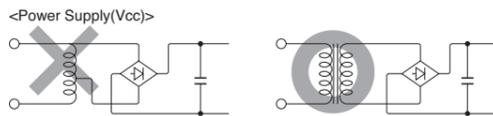

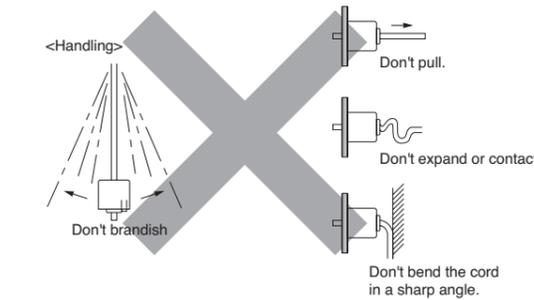

We resolve these problems by our original technologies of the photo-electronic system and the electronic circuit design.

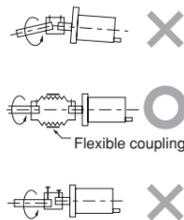

Precautions for Installation

- 1) Do not give the encoder an excessive shock or vibration because some of the encoders are equipped with a glass disc.
- 2) The shaft of the encoder is hold with a pair of bearings. An excessive load to the shaft may deteriorate the life and/or accuracy of the encoder. Avoid an excessive load to the shaft.
- 3) Enough power supply to encoder should be guaranteed. Unsatisfactory power supply may result in an abnormal output waveform.
- 4) For encoder output connection, use a shielded cable. To avoid AC interface pickup, the cable should be run apart from heavy duty AC carrying lines.
The maximum length of the cable is 5m for Voltage output, and 10m for Open Collector output, but Line Driver output is preferable if there is interference of noise.
- 5) As some optical components are used in the encoder, the influence of dust, oil, water and etc. should be minimized when installing.
- 6) The specification and mechanical dimensions are subject to be changed without prior notice.

Precautions for Installation

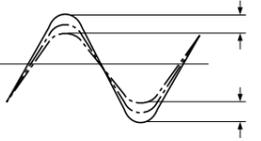

- Connect with a flexible coupling such as a bellows coupling between the encoder and the rotational shaft.

Don't bind tightly slipping down their center of the shafts over 0.1mm like both side of drawings above.

Explanations on NEMICON Encoder Phraseology

| Phraseology | Explanations |
|--|--|
| Incremental Encoder | Pulse train and sinusoidal signal train are given as incremental data |
| Absolute Encoder | Mechanical angular position is given as absolute data |
| Sine Wave | Analog signals of almost sine wave generated for photo sensor |
| Amplitude | Average amplitude value of output sine wave |
| Amplitude Variation | Amplitude regulation of output sine wave |
| Resolution | Output pulse numbers in a revolution of encoder shaft |
| CW Rotation | Clockwise (see from shaft side) |
| CCW Rotation | Counter Clockwise (see from shaft side) |
| 2 Signals of 90° Phase Difference | 2 signals each 90° phase difference by electrical angle (SigA, SigB) |
| Index Signal | Datum position signal generated once a revolution (SigZ) |
| Angular Signal | Magnetic pole position signals for AC Servo-Motor (SigU, SigV, SigW, SigF0, SigF1, SigF2, SigF3) |
| Pole Numbers | The number of angular signal edges (Number of count up and count down of incremental signal in one rotation.) |
| Power Supply(Vcc) | Voltage supplied to encoder Apply the normal voltage within limit to encoder |
| Current Consumption | Current consumed by encoder Power Supply(Vcc) needs current capacity over the current consumption specification |

Explanations on NEMICON Encoder Phraseology

| Phraseology | Explanations |
|--|---|
| Voltage Output (NPN) | Voltage signal generated output circuit with pull-up resistor on collector of grounded-emitter transistor |
| Open Collector Output (NPN) | Output with collector opened (No voltage signal) (Users have to add a pull-up resistor.) |
| Line Driver Output | Differential output by Line Driver IC (Refer to RS422A) |
| Push-Pull Output | Output circuit with both emitters of NPN and PNP transistor |
| Maximum Sink Current | Max. sink current of encoder's output circuit |
| Rise & Fall Time of Output Signal | The time lap between 10% to 90% level of pulse signal edge |
| Maximum Frequency Response | The frequency which satisfies the specifications of the wave form and duty ratio of A, B phases |
| Insulation Resistance | Impedance between output and body of encoder (Test by Megger) |
| Starting Torque | Rotating moment necessary for shaft starting |
| Shaft Loading | The load put to rotating shaft |
| Bearing Life | The approximately total bearing rotation in consideration of shaft loading |
| Maximum Permissible Speed | Maximum rotation allowed mechanical in a minute |
| Operating Temperature | Temperature range for operation satisfied specification |
| Storage Temperature | Temperature range for storage no applying satisfied specification |

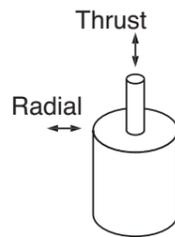

Table of Rotary Encoder

○Micro Encoder

GJ TYPE

The following are to be cared when a plastic made coupling is used.

- Fastening torque of set screw is to be cared not to exceed the specified torque in the figure. Otherwise the screw tap could be damaged resulting is shaft slippage.
- The shaft must be inserted less than "B" dimension, not to be engaged to deep.
- Do not apply over torque to encoder shaft.
- High speed rotating use for encoder over 3000min⁻¹ must be carefully designed securing safety factor over 2.0.

| Output waveform | 25~75%(H/(H+L)×100)Square wave | Ingress Protection | IP67 | | | | |
| Maximum output voltage | DC 30V | | | | | | |

* It's different depending on a used module and the material of the gear.
* Please refer to the latest specifications.

Encoders for Customers

[Develop Custom Made Encoders]

Followings are several kinds of the products developed by coordinated efforts with our customers.
(Only the small portion of the such products are shown by the limit of the paper.)

12SA Model

Shaft Type
Sine-Wave Output Encoder(A, B)

- Feature
- Small-size house encoder with OD12mm (OD12mm x L13.5mm).
- Low torque, low inertia type.
- Highly accurate signal.

60H Model

Hollow Shaft Type Encoder
Square Type

- Feature
- OD60mm Hollow shaft type Encoder(OD60mm X 38mm)
- Through type
- Suitable shape for mounting

47H Model

Hollow Shaft Type Encoder

- Feature
- OD47mm hollow shaft type encoder (OD47mm x L34mm).
- High resolution type with 8192 P/R.
- Output signal of 6 signals of ABZUVW with linedriver.

47T Model

Tepared Shaft Type Encoder

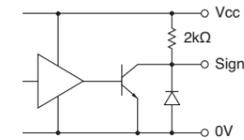

- Feature
- OD47mm Tepar shaft type encoder (OD47mm x L38.4mm).
- High resolution of 8192P/R.
- Output signal of 6 signals of ABZUVW with linedriver.

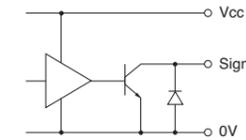

Output Circuit

(Example circuits are as follows, if you need more information, please see the detail catalog.)

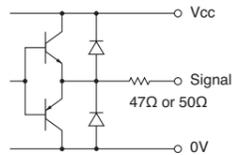

1) Voltage Output

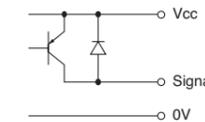

2)Open Collector output

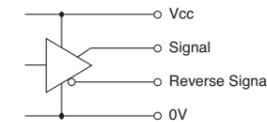

3)Push-Pull output

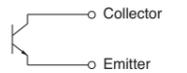

4)PNP Mode Open Collector Output

5)Line Driver Output

6)Sine Wave Signal Output

Output signal timing

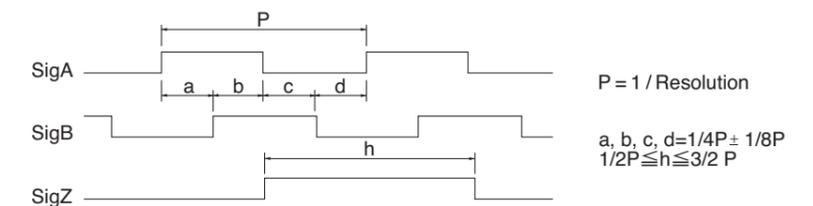

(Example circuits are as follows, it's typical output timing chart. If you need more information, please see the detail catalog.)

1)Voltage Output

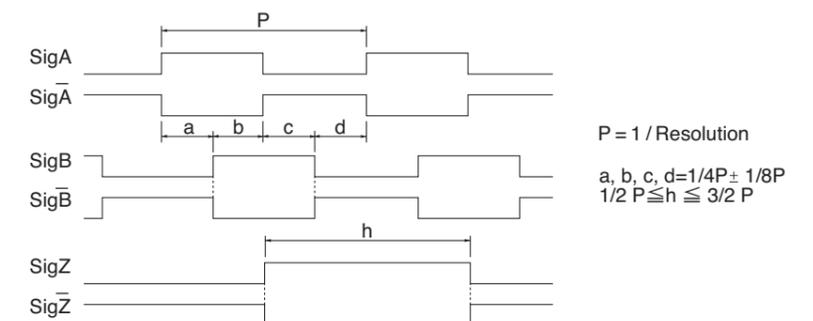

2)Open Collector Output

3)Push-Pull Output

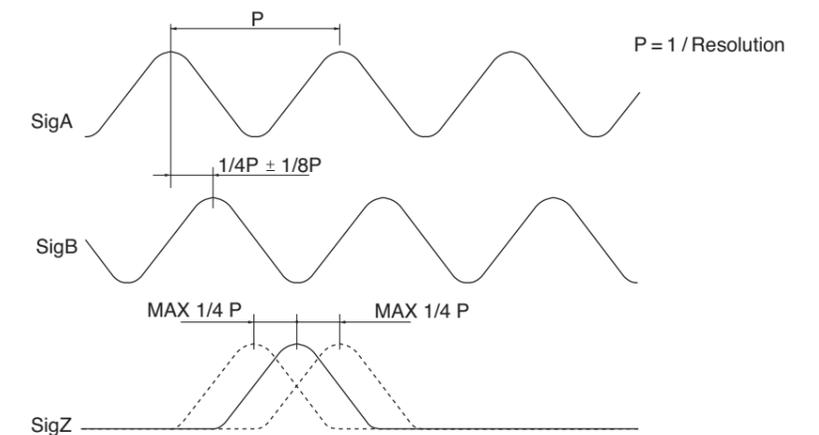

4)PNP Mode Open Collector Output

5)Line Driver Output

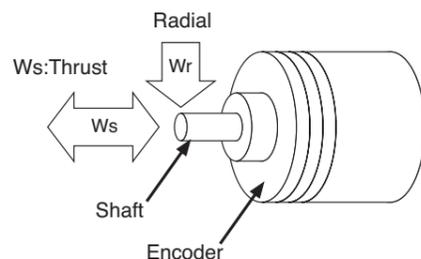

6)Sine Wave Signal Output

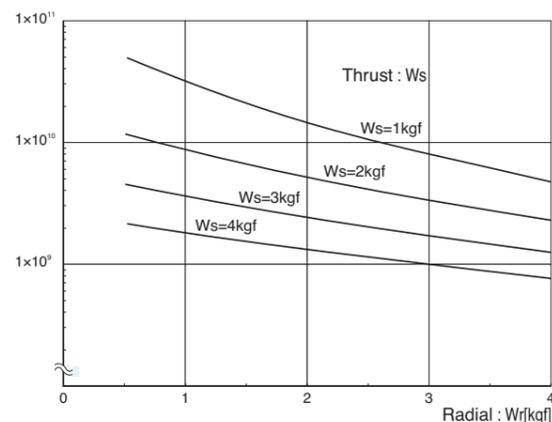

Bearing Life

The followings are the examples of different bearing lives when exerting radial and thrust loading to the bearings.(Theoretical value)

38S

Total Rotation [R]

NE

Total Rotation [R]

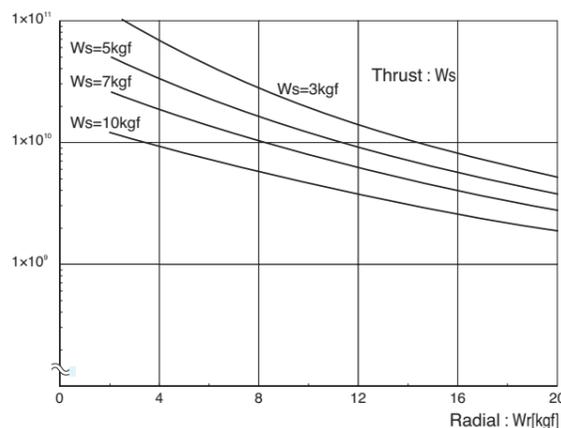

Table for Cable in Use

| Applicable Models | Cable Model | Nominal Cross-Section Area(mm ²) | Number of Cores | Outer Diameter (mm) |

Warranty and Maintenance

The Followings are Warranty and Maintenance of our products:

1. Warranty

- (1) Our products provide a warranty of two year period after shipment.
- (2) In this period, the warranty is not available if in following cases:
 - (a) The products are dropped, shocked, mis-handled, or used beyond the specifications determined.
 - (b) The natural disasters such as flood, fire, etc.
 - (c) The products are repaired or modified by others except NEMICON CORP.

2. Charged Repair

- (1) The repair out of Warranty Period will be charged in accordance with NEMICON's Regulations.
- (2) Overseas (including on-visit) repairing service will be charged otherwise on discussion.
- (3) In case of request for test report, extra charge is necessary.

3. Service Network

Please contact our sales department or nearest agents for maintenance service.

4. Others

- (1) The specification and mechanical dimensions are subject to be changed without prior notice.
- (2) For more details or those other than these items will be stipulated otherwise.
